- Lotion pumps (3)
- Fine mist sprayers (3)
- Foam pumps (3)
- Trigger sprayers (3)
- Treatment pumps (3)

Why work with us

Standard neck sizes

18/410 through 40/400, so pumps fit the bottles you already use.

Defined dosage

Output per stroke specified and tested, from fine mist to full lotion doses.

Custom finish

Color matching, metallization, UV coating and soft-touch.

Fit to bottle

Dip tube cut to length for your container.

How we check quality

01
Material check

Raw materials and components are checked when they arrive.

02
In-process checks

Dimensions and appearance are checked during production.

03
Final inspection

Finished goods are inspected against the approved sample.

04
Packing check

Cartons and pallets are checked before export shipping.

How an order works

Send requirements
Product, size, quantity and decoration.

Review samples
Stock samples or a new sample from your drawing.

Production
Mass production after sample approval.

Quality check
Inspection before packing.

Shipping
Export packing by sea, air or express.

KW SPRAY PUMP

Sample concept

Design illustration. Confirm neck finish, output and compatibility with a sample.

Long-Spout Lotion Pump

The extended spout reaches past a wide bottle shoulder. Check the outlet position against your bottle drawing before choosing a dip tube.

Brush-Head Foam Pump

An angled silicone brush surrounds the foam outlet. Test your cleanser with the brush face and check the fit of the foaming chamber inside the bottle.

Mini Trigger Sprayer

A short single-finger trigger sits close to the bottle neck. Check finger clearance and the spray pattern with your formula in the intended bottle.
